Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/916,397

Applicant(s)

REDLICH ET AL.

Examiner

Michael Pyzocha

Art Unit

2137

— The MAILING DATE of this communication appears on the cover sheet with the correspondence address —
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 December 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 63-77,90-101 and 224-234 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 63-77,90-101 and 224-234 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 2137

DETAILED ACTION

1. Claims 63-77, 90-101 and 224-234 are pending; all remaining claims have been withdrawn.
2. Amendment filed 12/15/2005 with a request for continued examination has been received and considered.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 63-64, 66-67, 77, 90-92, 94-97, 224-226, 228-230 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fahlman et al (US 5960080) and in view of Anderson et al (US 5581682) and further in view of Flyntz (US 6389542).

As per claims 63, 90-91 and 224, Fahlman discloses securing data in a computer network with one or more security sensitive words, characters or icons, said computer network having a plurality of computers interconnected together, one of said plurality of computers designated as a data input computer and each of said plurality of computers having a memory therein, a

Art Unit: 2137

first and a second memory designated as a remainder store and an extract store in one or more computers of said plurality of computers, comprising: filtering data input from said data input computer and extracting said security sensitive words, characters or icons from said data to obtain extracted data and remainder data; storing said extracted data and said remainder data in said extracted store and said remainder store, respectively; and, permitting reconstruction of said data via said extracted data and remainder data only in the presence of a predetermined security clearance (see column 3 lines 27-67; Figures 2 and 6; column 5 lines 27-32).

Fahlman fails to disclose filtering based on security levels; storing filtered data for different security levels in different locations providing a security clearance to obtain access to the extract store and providing said access only after the presentation of said security clearance.

However Anderson et al teaches filtering based on security levels (see column 5 lines 3-15) and Flyntz teaches separate storage and providing access control to the memory (see figure 1 and corresponding description of figure 1 in columns 5-7).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to filter the data of Fahlman based on security levels and to store the extracted data

Art Unit: 2137

in different access controlled locations based on security level.

Motivation to do so would have been to require a user have the correct authority to view a redacted document (see Anderson et al column 5 lines 3-15) and to provide a multilevel security system (see Flyntz column 5 lines 17-32).

As per claim 64, the modified Fahlman, Anderson et al and Flyntz system discloses defining a filter prior to said filtering step (see Fahlman column 3 lines 35-47).

As per claims 66-67, 95-97, 229-230, the modified Fahlman, Anderson et al and Flyntz system discloses encrypting one or both of said extracted data and remainder data prior to storing and permitting reconstruction includes decrypting one or both of said extracted data and remainder data (see Fahlman column 6 lines 53-61).

As per claims 77, 91-92, 225-226, the modified Fahlman, Anderson et al and Flyntz system discloses mapping the two memories and storing the map (see Fahlman column 3 lines 27-67).

As per claims 94 and 228, the modified Fahlman, Anderson et al and Flyntz system discloses the second computer is said data input computer and said filter is adapted to be couple to said second computer (see Fahlman Figure 6).

Art Unit: 2137

5. Claims 65, 76, 93, 98, 101, 231, 227, 234 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Fahlman, Anderson et al and Flyntz system as applied to claims 63-64, 90, 92, 224, 226 above, and further in view of Schneier (Applied Cryptography).

As per claims 65, 98, and 231, the modified Fahlman, Anderson et al and Flyntz system fails to disclose storing or destroying the filter.

However, Schneier teaches destroying information (see pages 228-229).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Schneier's method of destroying information to destroy the filter of the modified Fahlman, Anderson et al and Flyntz system.

Motivation to do so would have been to protect the secret information (see Schneier page 229).

As per claims 76, 101 and 234, the modified Fahlman, Anderson et al, Flyntz, and Schneier system discloses deleting said data input from said data input computer after the step of storing (see Schneier pages 228-229).

As per claims 93 and 227, the modified Fahlman, Anderson et al and Flyntz system fails to disclose encrypting and decrypting the map.

Art Unit: 2137

However, Schneier teaches encryption and decryption (see page 220).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to encrypt the modified Fahlman, Anderson et al and Flyntz system's map before storing.

Motivation to do so would have been to have a higher secrecy level (see page 220).

6. Claim 68 rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Fahlman, Anderson et al and Flyntz system as applied to claim 64 above, and further in view of Kluttz et al (US 6598161).

As per claim 68, Fahlman fails to disclose partial reconstruction.

However, Kluttz teaches partial reconstruction based on different levels of security for subsets of information (see abstract).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Kluttz's partial reconstruction based on different security levels for the filtered information of the modified Fahlman, Anderson et al and Flyntz system.

Motivation to do so would have been to allow for different levels of access to information (see column 1 lines 62-64).

Art Unit: 2137

7. Claims 69-73 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Fahlman, Anderson et al and Flyntz system as applied to claim 64 above, and further in view of FOLDOC (URL webpage).

As per claims 69-73, the modified Fahlman, Anderson et al and Flyntz system fails to disclose the use of URLs to exchange the data between clients and servers.

However, FOLDOC teaches such limitations (see pages 1-2).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use the URLs of FOLDOC to identify and transfer data in the modified Fahlman, Anderson et al and Flyntz system.

Motivation to do so would have been to allow data to travel over the Internet (see FOLDOC page 1).

8. Claim 74 is rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Fahlman, Anderson et al, Flyntz, and FOLDOC system as applied to claim 73 above, and further in view of Schneier.

As per claim 74, the modified Fahlman, Anderson et al, Flyntz, and FOLDOC system fails to disclose encrypting and decrypting the information.

However, Schneier teaches encryption and decryption (see page 220).

Art Unit: 2137

At the time of the invention it would have been obvious to a person of ordinary skill in the art to encrypt the modified Fahlman, Anderson et al, Flyntz, and FOLDOC information before storing.

Motivation to do so would have been to have a higher secrecy level (see page 220).

9. Claims 75, 99-100, 232-233 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Fahlman, Anderson et al, and Flyntz system as applied to claims 64, 90 224 above, and further in view of Gurley (US 5036315).

As per claims 75, 100, and 233 the modified Fahlman, Anderson et al, and Flyntz system fails to disclose one of said computers includes a data display system with at least two separate but visually overlaid displays and at least two respective display interfaces, the step of reconstruction including displaying said extracted data on one of said at least two displays and displaying said remainder data on another of said at least two displays.

However, Gurley teaches such a limitation (see the abstract and Figure 1 number 100).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Gurley's displaying

Art Unit: 2137

to display the data in the modified Fahlman, Anderson et al, and Flyntz system.

Motivation to do so would have been to display overlapped information (see abstract).

As per claims 99 and 232, the modified Fahlman, Anderson et al, Flyntz, and Gurley system discloses one of said computers includes a display fed from a video memory having a plurality of frame memory segments, the information processing system including said compiler adapted to be coupled to said video memory, said compiler having means for interleaving extracted data and remainder data into respective ones of said plurality of frame memory segments on said one computer (see Gurley abstract and Figure 1 number 100).

Double Patenting

10. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 2137

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 47, and 72 of copending Application No. 10008209 in view of Kluttz et al. The claims of the copending application add the limitation of subsets of data have different security levels with different users having different security clearance. Kluttz teaches this limitation as shown in the above rejection of claim 68. At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Kluttz's different security levels for the filtered information of the copending claim.

11. Motivation to do so would have been to allow for different levels of access to information

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

12. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 46 of copending Application No. 10008218. Although the conflicting claims are not identical, they are not patentably distinct from each other

Art Unit: 2137

because at the time of the invention it would have been obvious to one of ordinary skill in the art to modify the present claims to filter the security information based on attack warnings. Motivation to do so would have been protect the security data.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

13. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 20 of copending Application No. 10155525. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to modify the present claims to store the data remotely and to secure email as in the claims of the copending application. Motivation to do so would have been to allow multiple users to access the data and to allow the use of the SMTP protocol.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

14. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting

Art Unit: 2137

as being unpatentable over claims of copending Application No. 10155192. Although the conflicting claims 1 and 7 are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to modify the present claims to be performed on a user system as opposed to a network system. Motivation to do so would have been to allow all of a users data to be filtered.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

15. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 53, and 67 of copending Application No. 10277196. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to modify the present claims to modify the copending claims to be done at a user level with different security levels. Motivation to do so would have been to allow a public computer to allow access to different information to different users.

Art Unit: 2137

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

16. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 47, 48, 124, and 146 of copending Application No. 10390807. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to modify the present claims to filter data when a portable computing device is outside of an area. Motivation to do so would have been to prevent security data from being accessible from a non-secure area.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

17. Claims 63, 90 and 224 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 5, 7, and 9 of copending Application No. 10998366. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to modify the present claims to filter data for

Art Unit: 2137

workstations with independent security levels. Motivation to do so would have been to prevent security data from being accessible workstations without the proper security clearance.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

18. Due to the vast number of applications that qualify as a provisional double patenting rejection only the independent claims of the present application have been rejected.

Response to Arguments

19. Applicant's arguments with respect to the above claims have been considered but are moot in view of the new ground(s) of rejection.

20. During the interview Applicant respectfully requested notification of any allowable subject matter, however, as the claims currently stand they do not contain limitations that can be deemed allowable.

Art Unit: 2137

Conclusion

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rackman (US 5903646) teaches filtering and storing data.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pyzocha whose telephone number is (571) 272-3875. The examiner can normally be reached on 7:00am - 4:30pm first Fridays of the bi-week off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
